

JAVA ASSIGNMENT

DAY 2

- 1) Create a class employee. Inside that class create three variable name, age, city. Also create a function to display the three variables. In the main function create two objects and call the function using it.

CODE:

Main.java

```
package com.Employee;

public class Main {

    public static void main(String[] args) {
        employee e=new employee();
        e.display();
    }
}
```

employee.java

```
package com.Employee;

public class employee {
    String name="Manisha Joshi";
    int age=21;
    String city="Mumbai";

    public void display()
    {
        System.out.println("The name is "+name);
        System.out.println("The age is "+age);
        System.out.println("The city is "+city);
    }
}
```

OUTPUT:

```
Main X
"C:\Program Files\Java\jdk-15\bin\java.exe" "-javaagent:C:\Program Files\JetBrains\IntelliJ IDEA
The name is Manisha Joshi
The age is 21
The city is Mumbai

Process finished with exit code 0
```
